

☉ Ideal For

Directors of:

- * Facilities
- * Safety
- * Accreditation
- * Construction
- * Real Estate

"For a health system that has not implemented these solutions, I believe this program can be life changing. The value of having this information ready, available and tied together cannot be overstated."

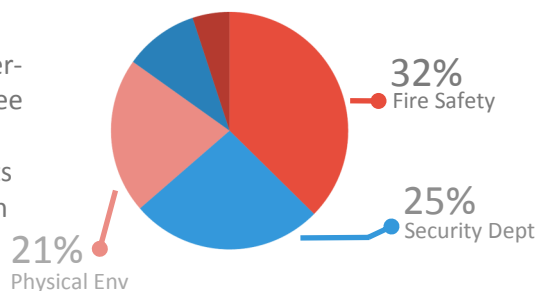

☉ Complete Solution

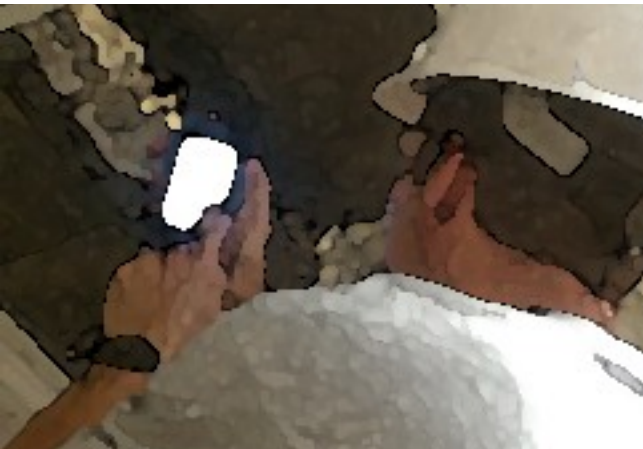

All eMediTrack solutions provide a 360 degree comprehensive approach to an issue. Our solutions take you from idea or deficiency through resolution and report the information back to you in intuitive real-time dashboards.

Do You Know?

Clients using eMediTrack say they enjoy the simple and intuitive interface that allows them to quickly see the status of their environment in real-time. Dashboards and reports are easily configured to meet each user specific requirements.

Efficiency. eMediTrack makes documentation of pre-construction risk assessments easier, and automatically notifies all responsible parties about any required tasks.

Accuracy. eMediTrack automatically sets due dates for action plans, notifies responsible parties and admins about approaching due dates, and ensures you can close the loop.

Functional Walkthrough

The project risk manager comprehensively tracks and automates every layer of the pre-construction risk assessment and risk mitigation processes, automating the creation of required documentation and improving accountability across the multi-disciplinary team.

The associated processes for documenting interim life safety measures and infection control risk assessments are also automated and documented electronically. Using off the shelf smartphones and tablets, responsible parties can document all monitoring surveys electronically.

Once all work is completed, every member of the multi-disciplinary team can receive email notifications to approve and verify that all work was done properly and complete the closeout process. That means no spreadsheet dual entry and no more wasted time digging through your email inbox.

Outcomes

The project risk manager does not stop at improving documentation and loop closing processes. The solution comes complete with comprehensive real-time reports and dashboards. No additional labor is required to create these reports or dashboards, as they utilize dynamic data coming from your vendors and internal team members.

This translates into more successful modifications to your internal processes, the ability to forecast projects and deadlines more accurately, and ultimately improved risk mitigation and outcomes. You can even create custom reports and dashboards that mirror the performance indicators being evaluated by committees and leadership.

Summary

- ⇒ Improve process efficiency and guarantee documentation and accreditation readiness.
- ⇒ Implement processes that result in improved risk mitigation and increased accountability across the organization.
- ⇒ Cut associated labor hours and costs in half.
